

Instructions for interactively determining Commission Districts using Maps Online

When using Maps Online, the program will shade and identify the Commission District when the user turns on Commission District Boundaries. This is done by following the steps shown below:

The user can zoom in on an area of interest to see which district covers that area. Alternatively, the user can click on the **Parcel Search** tab (to the left of the **Layers** tab), and then can search by Owner Name, Address, Subdivision, or Parcel Number. The map will be redrawn with the new area of interest and Commissioner District. The user can click on the **i** button (Identify), and the property information will be displayed, with the Commission District information below. Please see the following screen shots for a sample of the results:
